### Read Section B. Choose the best ending to each sentence.

Booth was very influenced by another well-known psychologist called Philip Zimbardo. In 1971, Zimbardo conducted an experiment which is now very famous. He called it the Stanford Prison Experiment. Zimbardo wanted to investigate whether people can behave in different ways depending on the situation and their role in it. In his experiment, 24 male participants were divided into two groups, one acting as prisoners and the other as prison guards. He found that people conformed to their roles in the experiment. Booth found this very interesting.

In 1990, Booth conducted a replica of Zimbardo's experiment. However, he did not copy every aspect of the previous experiment. Instead, Booth wanted to see if women were as easily led as the men in Zimbardo's experiment appeared to be.

6. Booth was ...
  - a. friends with Zimbardo.
  - b. at the same university as Zimbardo.
  - c. interested in Zimbardo's work.
  - d. working at the same time as Zimbardo.

  - c. the participants acted like prison guards.
  - d. the participants conformed to their roles.
10. Booth decided to change Zimbardo's experiment by ...
- a. using female participants.
  - b. using fewer participants.
  - c. using more participants.
  - d. having more guards.

Marks: 10

### Read Section C. Find the best answer to each question.

The participants were split between the roles, with 12 in each. Each participant was assigned the role of prisoner or prison guard. The role assigned was not based on personality or any other characteristic but by chance. To increase the authenticity of the experience, the experiment was not conducted in the normal lecture rooms. Instead, it took place in the basement of Princeton University, which was converted into a jail. At the beginning of the experiment, the 'prisoners' were 'arrested' in the middle of the night by the 'guards' and put into the 'prison'.

Participants acting as guards were given a police uniform, mirrored sunglasses and fake guns. These items all reinforced the guards' role, especially the sunglasses, which prevented eye contact and therefore made the guards seem more impersonal. The guards also worked in shifts, just like real prison guards, further reinforcing their role. They were told that they were in charge of the prison and that they could punish the prisoners if they did not obey, although they could not use physical violence.

## Progressive Skills 3: Post-test

Participants acting as prisoners wore loose-fitting grey dresses with numbers sewn onto them. They were not given shoes. They wore bracelets on their wrists to mimic those of real prisoners. The guards always used the numbers on the dresses instead of their names.

Booth found the same results as Zimbardo and stopped the experiment after three days.

11. How many participants were there?
- a. 24.
  - b. 12.
  - c. 36.
  - d. 48.
12. How were the roles assigned?

- a. In an area under Princeton University.
  - b. In Princeton Jail.
  - c. In the basement of a local jail.
  - d. In the normal lecture rooms.
14. How did the experiment distinguish between prisoners and guards?
- a. The guards could hit the prisoners but the prisoners were not allowed to hit the guards.
  - b. The prisoners worked in shifts but the guards were on duty all the time.
  - c. The prisoners had loose clothes while the guards had police uniforms.
  - d. The prisoners were not allowed to look at the guards.
15. How did the experiment make the prisoners feel like prisoners?
- a. The mirrored sunglasses so they could not make eye contact.
  - b. The grey clothes, the numbers and the bracelets.
  - c. The grey clothes and night-time arrests.
  - d. The physical punishment from the guards.
